

Hydro Dynamics, Inc.

Harnessing the Power of Cavitation

August 5, 2013

New Mission Statement for Hydro Dynamics, Inc.

Hydro Dynamics, Inc. (HDI) of Rome, Georgia (www.hydrodynamics.com) announced its new mission statement today. The statement reads as follows, *"To develop and implement cavitation technology across multiple industries, processes and nations allowing our customers to operate more efficiently and profitably. We will be globally recognized as the leader in cavitation technology with our ability to match cavitation solutions to customer needs."*

Over the last decade HDI has morphed from a company selling almost exclusively in the United States to a company that sells a large percentage of its unit internationally. The industries have also become more diverse and now include biogas, petroleum, biodiesel, chemical and food. Over the coming years this trend is expected to continue and accelerate as we add strategic partners and new applications are developed.

About Hydro Dynamics

Hydro Dynamics is the developer of a patented cavitation process intensification technology called the ShockWave Power Reactor (SPR), enabling customers to solve critical mixing and heating problems. Reactors are operating on four continents with well-known customers in applications as diverse as increasing biogas yields to biodiesel transesterification to mixing petroleum drilling mud to more efficient homogenization and pasteurization of liquid eggs. The ShockWave Power Reactor allows customers to significantly decrease costs and increase profits, often with environmental and safety benefits. Learn more at <http://www.hydrodynamics.com>.
